- *Volunteer & Web Developer*   Mar 2014

PROJECTS

Academic Projects

- Reliable Load Balancing Routing Protocol in SDN-based
  Ad-hoc Networks During DDOS Attack.   Jan 2015 – Apr 2015
  - Load balancing is a problem of resource distribution which guarantees that all resources are used with maximum utilization. In this project, we plan to design a reliable multipath routing protocol which takes both these factors into consideration and also to indentify DOS Attack. It is expected to produce better performance against fault or attacks and heavy traffic scenarios.
- College Management System Using LAMP Stack   Aug 2014 – Nov 2014
  - Since Our College doesn't have any proper management system, I and a group of students gathered requirements from faculties and created a management system using PHP and MySQL(LAMP Stack). Some Special features includes sophisticated Control Panel, Data Visualization using D3.js and so on.

OTHER PROJECTS	**Freelance Projects**
	■ Ticket Management System - Recruiting Services and HR Operations
	• Web App for HR and group of recruiters to keep track of HR Operations and Recruiting Services in a Consultant and Human Resource Company. Built using Python with Web2py Framework.
